Unscented Kalman Filtering for Simultaneous Estimation of Attitude and Gyroscope Bias

Donghoon Kang[1,2], Cheongjae Jang[1], and Frank C. Park[1]

[1]Seoul National University
[2]Korea Institute of Science and Technology

- Proposing the state dynamics and measurements in a way that leads to "closed-form" equations for covariance propagation and update in a matrix Lie group setting.

- Presenting an alternative form of the covariance of the solution to Wahba's Problem, which is more efficient and accurate.
